

Flight Simulator Platform for Wastewater Operations – Enhancing Facility Operations with Operator Focused Process Models

September 6 or 7, 2017 | 8:30AM-5:00PM

NTMWD Engineering/IT Building, 505 E. Brown St., Wylie, TX 75098

Operator Training Focus:

The course will cover topics including the critical role training plays in developing competent and motivated water & wastewater operators. As well as challenges the water industry faces with the growing complexity of the processes used in the treatment process, increasingly stringent regulations and an ageing workforce. Hands-on, simulation based platforms allows training to be done in a realistic operational environment. Presenters will provide the most advanced process modeling solutions that are commonly utilized for designing water and wastewater treatment processes to create high fidelity, realistic 3D simulator platforms that replicate all of the operational realities of an actual water and wastewater treatment process.

There are two course dates; Wednesday, September 6 as well as Thursday, September 7. Both are from 8:30 am to 5:00 pm in the main training room of the Engineering/IT building at North Texas Municipal Water District. Seats are limited due to software requirements for training. Register early to guarantee a seat.

REGISTRATION

CIRCLE ONE: SEPT 6 OR SEPT 7

Name: _____

Company: _____

Op or PE License#: _____

Address: _____

City: _____ State: _____

Zip: _____ Phone: _____

Email: _____

PAYMENT

WEAT MEMBER: \$85

WEAT NON-MEMBER: \$135

CHECK MC VISA AMEX

CC No.: _____

Expiration Date.: _____

Name on CC: _____

Signature: _____
